

# Introducing the **NEW Robomedica™ Body Weight Support System**

**NEW**

**Frame design** – Lighter frame that offers more unobstructed lateral views.

**NEW**

**New seating system** – More comfortable, easier to clean, and visually appealing cushioned seating system can be folded over the seat cushion (if no step trainer is necessary).

Quadruple bungee cord stabilization system provides lateral stability and allows reciprocal arm swing and avoids weight bearing on the arms.

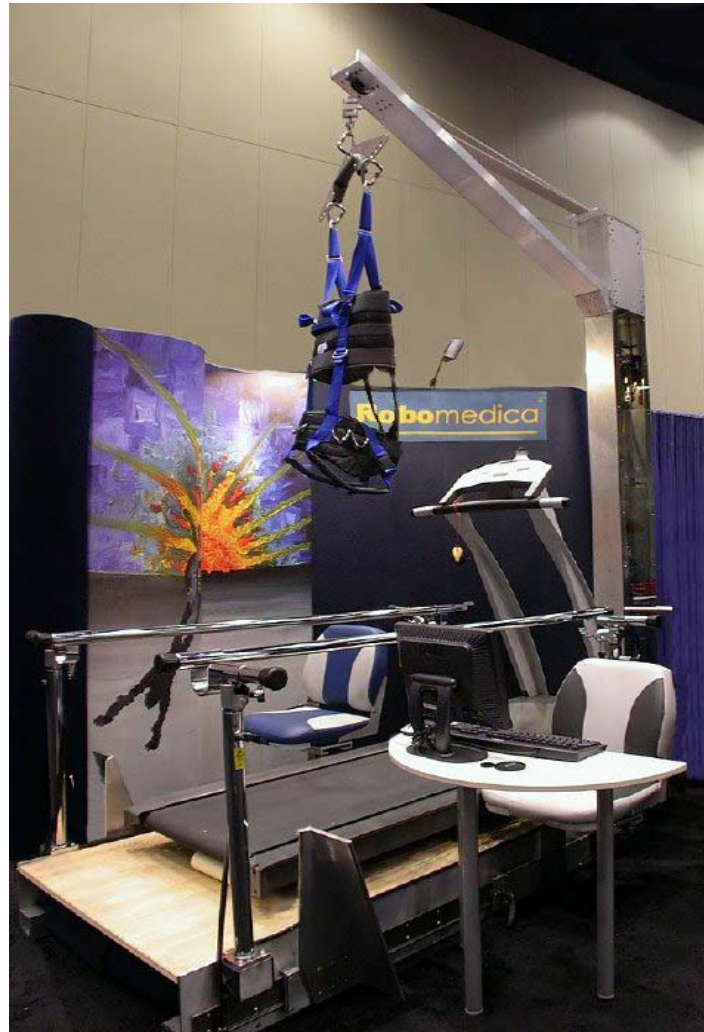

Load cell allows quantification of body weight support in real time.

**NEW**

**Handbrake system for easy adjustment of seats and footrests** – Pull up to adjust and push down on the handle to lock in place. Infinitely adjustable seat and footrest system for step trainer provides a safe, comfortable way to provide manual assistance as needed.

**NEW**

System is designed for future integration of additional robotic assistance devices for locomotor training.

BWS-5000 on display at APTA 2004 in Chicago, IL June 2004

**NEW**

**Fully adjustable elevated treadmill platform** – Allows virtually any treadmill to be used with the system (treadmill not included). Wheelchair ramp (not shown) included with system easily slides underneath treadmill platform when not in use. Pivot platform, stairs and other components are also available. Contact Robomedica, Inc. for more details.

Computer allows for continuous control of body weight support levels and modulation of ground reaction forces by ROBO FORCE™.

**NEW**

**“Compressor Ready” system** – Avoid the cylinder and demurrage charges and the inconvenience of changing empty cylinders.

**NEW**

**Electronically controlled system** – Enhanced control algorithms and easy to use software interface. Controller integration with BWS-5000 software with certain types of treadmills.

**NEW**

**Now available! System available in shorter size to accommodate 8' ceilings! (StepGain™ GRF-8)**

**Please call to see how the Robomedica Advantage can work for your patients, therapists and facility**
